*Service, maintenance and piping systems*

## Description

The company Hagenbuch Hydraulic Systems AG was founded in 1955 in Ebikon and its still involved with hydraulic drive technology even today.

In order to meet the demand for comprehensive solutions, we have enhanced our development and have also specialised in the areas of mechanics, electronics and control in addition to the production of components and units.

We regularly provide hydraulic equipment and controllers for **steel water engineering** and **industrial plants**. The following reference images will give you a brief overview.

Our delivery portion, depending on the customer, includes the gears (cylinders), the hydraulic units, the controller and the line connections.

With our sophisticated piping system, we can offer you an alternative to welding technology to connect pipes.

### **Connecting without welding with the Walform technology offers you the following benefits:**

- Secure, positive-action hold of the pipes
- Unique assembly end
- Reduced pick-up path
- Minimal assembly torque

### **A plus of security with a form lock:**

- Solid / pressure-resistant
- Absolutely sealed
- Approved in safety areas
- Makes allowances for assembly errors
- Pressure decrease and noise development comparable with other screw systems

We will be happy to advise you and show you the technical capabilities to find the optimum solution for you.

The Hagenbuch Service Center looking forward to meeting you!
